

Library Management System - Requirements Analysis using MOSCOW Method					
S.No	Requirement	MOSCOW Category	Impact on Users/Stakeholders	Feasibility (Time, Budget, Resources)	Justification
1	Search books by title and author	Must-Have	High - core functionality users need every time they use the system; without it the catalog is unusable.	High - simple database query feature, low development effort and cost.	Essential for basic library operations; low cost and high impact make it a clear Must-Have.
2	Online book reservation system	Must-Have	High - allows users to reserve borrowed-out books remotely, directly improving user satisfaction.	Medium - requires reservation logic and status tracking but is well within typical timelines.	Core expectation for a modern LMS; high user value justifies prioritizing it despite moderate effort.
3	Generate monthly reports on borrowed books for administrators	Should-Have	Medium - valuable for administrators to track usage and inventory, but not needed by end users daily.	Medium - needs report generation and scheduling logic; moderate development time.	Important for management decisions but the system can function without it initially, so Should-Have.
4	Email notifications for overdue books	Should-Have	Medium-High - reduces late returns and improves user experience by reminding borrowers.	Medium - requires email service integration and scheduled triggers.	Adds strong operational value and is feasible with standard email APIs; not blocking core use.
5	QR code scanning for borrowing and returning books	Could-Have	Medium - speeds up circulation desk operations but manual entry can substitute.	Low-Medium - requires QR generation/scanning hardware or camera integration, added complexity.	Enhances convenience but is not essential; can be added later if time and budget allow.
6	User-friendly dashboard for librarians	Must-Have	High - librarians rely on this daily to manage circulation, inventory, and users.	Medium - standard UI/UX development effort using existing frameworks.	Central to daily operations for staff; system is impractical for librarians without it.
7	Allow users to review and rate books	Could-Have	Low-Medium - nice social feature that improves engagement but not core to lending.	Medium - needs moderation and rating storage, moderate added scope.	Improves engagement but does not affect core borrowing/returning workflow, so Could-Have.

Library Management System - Requirements Analysis using MOSCOW Method					
S.No	Requirement	MOSCOW Category	Impact on Users/Stakeholders	Feasibility (Time, Budget, Resources)	Justification
5	QR code scanning for borrowing and returning books	Could-Have	Medium - speeds up circulation desk operations but manual entry can substitute.	Low-Medium - requires QR generation/scanning hardware or camera integration, added complexity.	Enhances convenience but is not essential, can be added later if time and budget allow.
6	User-friendly dashboard for librarians	Must-Have	High - librarians rely on this daily to manage circulation, inventory, and users.	Medium - standard UI/UX development effort using existing frameworks.	Central to daily operations for staff; system is impractical for librarians without it.
7	Allow users to review and rate books	Could-Have	Low-Medium - nice social feature that improves engagement but not core to lending function.	Medium - needs moderation and rating storage, moderate added scope.	Improves engagement but does not affect core borrowing/returning workflow, so Could-Have.
8	Integrate a chatbot for user assistance	Could-Have	Low-Medium - helps with user queries but existing FAQs/support staff can cover this.	Low - requires NLP/chatbot integration, higher cost and development time relative to benefit.	Desirable enhancement but resource-intensive relative to its impact; deferred as Could-Have.
9	Develop a mobile app version of the system	Won't-Have	Medium - would improve accessibility, but web access already serves most user needs.	Low - separate mobile development track needs significant time, budget, and specialized skills.	High cost and effort versus current scope; excluded from this phase, revisit in future releases.
10	Provide multi-language support	Won't-Have	Low-Medium - benefits a subset of non-native language users but is not critical for core use.	Low - requires translation management and localization infrastructure, high effort for current scope.	Low immediate impact relative to implementation cost; not included in this project phase.
